

HARISH V

Full-stack developer · B.Tech CSE '27, SRMIST Trichy

harishvofficialwork@gmail.com · github.com/ZeonArc · linkedin.com/in/harishvdev · Trichy, Tamil Nadu, India

Full-stack developer building job queues, real-time apps and LLM pipelines with TypeScript, Node.js, Python and PostgreSQL. Looking for SDE and full-stack internships and 2027 new-grad roles.

EDUCATION

B.Tech, Computer Science and Engineering

2023 – 2027

SRM Institute of Science and Technology, Tiruchirappalli, Tamil Nadu

PROJECTS

Code Clash · Next.js, TypeScript, Supabase, PostgreSQL, React

Jun – Aug 2026

- Real-time 1v1 coding duels. Two players are matched by Elo rating, race to pass the same hidden tests, and the winner takes rating from the loser.
- Matchmaking is one atomic Postgres function using FOR UPDATE SKIP LOCKED, with no separate queue service. The search opens at ± 200 rating and widens by 100 every 10 seconds up to ± 600 , so a quiet queue still finds a match.

JobScheduler · Node.js, Express, PostgreSQL, Socket.IO, Next.js

Jul 2026

- A job queue that runs on Postgres alone: distributed workers, job dependencies, rate limits, retries and a dead-letter queue, with a live dashboard.
 - Workers claim jobs with SELECT ... FOR UPDATE SKIP LOCKED, so any number of them can poll at the same moment without two taking the same job.
- jobshedulerproject.vercel.app

DevLeap AI · Next.js, FastAPI, Python, PostgreSQL, LLM APIs

May – Aug 2026

- Reads a developer's GitHub repositories and builds a profile where every skill points to the file it came from, then drafts job pitches you approve before anything is sent.
 - The profiler clones a public repo, or a whole GitHub profile, and sends the source to an LLM to extract skills, Mermaid architecture diagrams and a plain-language summary, each tied to the file it came from.
- dev-leap-ai.vercel.app · github.com/ZeonArc/DevLeap-AI

DevGuardian · n8n, LLM APIs, Node.js, Express, Supabase

Mar 2026

- Watches a GitLab project. Each push, merge request and pipeline run goes through an n8n workflow that uses Gemini to flag leaked secrets, risky dependencies and failed CI, then opens a merge request with the report.
 - A GitLab webhook triggers an n8n workflow that normalises the event and routes it: pushes, merge requests and pipeline runs each take their own branch.
- github.com/ZeonArc/DevGuard

DocuGithub · n8n, LLM APIs, React, TypeScript, Supabase

Jan 2026

- Point it at a GitHub repository and it writes the documentation. n8n workflows analyse the code with Gemini, you refine the draft in a chat, and it pushes the result back to the repo.
 - The pipeline is five n8n workflows: initialise, analyse, generate, chat and push. The React app calls them through HMAC-signed webhooks.
- docugithub.netlify.app

Nebula · Electron, React, TypeScript, Node.js, Express

Sep 2026

- A desktop chat app with its own server inside. The chat gateway starts on localhost when the app opens, people on the same network can join, and voice runs peer-to-peer over WebRTC.
- An Express and Socket.IO gateway runs inside the Electron process on 127.0.0.1 and keeps its data in a local folder. Other clients on the LAN can point at the host machine and join the same servers.

SKILLS

Languages: TypeScript, JavaScript, Python, SQL, Java, C++

Interface: React, Next.js, Tailwind CSS, Electron

Services: Node.js, Express, FastAPI, Socket.IO, WebRTC

Data: PostgreSQL, Supabase, Prisma

AI & automation: LLM APIs, n8n

Infra & tooling: Git & GitHub, Docker, Vercel, Render, Jest, pytest, Stripe, Clerk / Auth0

CERTIFICATIONS

Product Management Simulation, Electronic Arts

Jan 2026
